Renaming PODs, the quick way

No more opening every file and typing the invoice number.

1. **Scan the PODs on the copier**
   One at a time, or many invoices together in one file. Both work.

2. **Double-click "Rename PODs" on your desktop.**
   Wait a few seconds for the first page to appear.

3. **Check the number in the big box.**
   It's also marked in yellow on the page. If it's right, press Enter.

4. **Wrong number?**
   Click the right number on the page (or type it), then press Enter.

5. **Keep pressing Enter until it says "All done!"**
   Pressed Enter by mistake? Click "Undo last".

Green tick = it's sure. Orange or red = please have a quick look.

Many invoices in one scan? It shows them page by page. At the end each invoice is saved as its own file, and the big scan goes into the 'Originals' folder.

Every time you fix one, it learns that supplier, so it gets it right next time.

New scans waiting? Press "Check for new scans" at the top.
